

Cosmic Voyage

A Scientific Discovery of Extraterrestrials Visiting Earth

by Courtney Brown

Published in 1996 by Dutton , A division of Penguin USA, 375 Hudson Street, New York, NY 10014, where the book jacket reads:

... The story of his extraordinary odyssey of exploration is one that needed to be told.

Dr. Brown made his discoveries using a process called Scientific Remote Viewing (SRV) -- a procedure originally developed by the U.S. military as a highly classified and strangely effective spy system. Brown himself was trained in this method by a former member of the military unit that specialized in remote viewing. Now the author has taken a technique designed as a verifiable and stunningly accurate espionage tool and turned it toward the heavens.

The results of his work are truly staggering. This fascinating book reveals that at least two alien civilizations have been and continue to be intimately involved with Earth humans:

A Martian race who, having barely survived an ancient natural catastrophe on their own world, still struggle to survive on their nearly dead planet and in hidden retreats here on Earth.

The Greys, a highly advanced humanoid people who nearly destroyed themselves by wanton abuse of their environment and who now seek to enhance their own evolution.

Further discoveries are even more astonishing. Using SRV, Brown was actually able to observe and interact with a distant galactic federation of extraterrestrial civilizations, which humans may one day be fortunate enough to join -- if we survive Earth's coming planetary crises.

Shocking, moving, and ultimately inspiring, *Cosmic Voyage* not only reveals vital new data about alien visitors, but also offers the first demonstrable proof of the existence of the human soul. Most importantly, it opens the way to the kind of meaningful interstellar diplomacy that may one day prove the true salvation of the people of Earth.

Here's what they're saying...

Quoting Whitley Strieber, Author of **Communion**:

"**Cosmic Voyage** breaks new ground, takes us on an extraordinary journey into some of the deepest mysteries of alien contact and the human future, and leaves us -- above all -- with a powerful new tool for further exploration. It is a wonderful, audacious, and important book, and off the scale when it comes to compulsive, delightful, exciting reading."

Quoting John E. Mack, M.D., Author of **Abduction**:

"If we are to reap the rich harvest of knowledge that the UFO field promises, we will need new methods of exploration suited to discovering phenomena that reach us from the subtle or unseen realms. Political scientist Courtney Brown, courageously applying the established methodology of Scientific Remote Viewing, has documented the reality of intelligent life outside of our planet. His book is important for both scientists and general readers who wish to expand our ways of investigating extraordinary phenomena."
